Moonlight 365 Accounting Workflow Product Sheet

Illuminating your path through the technology darkness.

Accounting can now provide employees with a single location to get answers: Moonlight 365 Accounting Workflow Solution

- Microsoft Power App
- Windows & Mac
- M365 & SharePoint Secure
- Intuitive and Easy-to-Use

Accounting Request - Home Page

The Accounting Department's biggest challenge is managing the constant flow of finance-related requests. Department resources are spent managing a nearly endless stream of requests. Requests regarding invoice questions, payment statuses, inquiries regarding vendors, expense reports, billing issues and many other accounting needs. Identical kinds of requests can arrive by different methods, in different formats and without complete information. Multiple requests are sometimes bundled into a single email which require different resources to review and respond. Interested in ending the chaos, and increasing requester happiness? With Moonlight 365 solutions we will build an interactive, secure, and internal web page where nearly all requests can be submitted. Each request becomes clear, consistent, and has the required data. Pair this with the Accounting Dashboard and tracking, responding, and completing tasks is simplified.

Microsoft In-Tenant Request Form:

- Confidential and Secure
- 100% Customizable for Accounting
- Easy Change Intake Form
- Connect to Accounting Databases
- Microsoft Security Applied
- Requester Notifications & Tracking
- Easy-to-Use & Fast to Deploy

A Web Based Accounting Dashboard for Tracking All the Inbound Requests

Imagine your Accounting Team managing work tasks instead of chasing email messages. No more accounting requests buried in email. Every request that can be submitted through the Accounting Request webpage flows directly into a centralized dashboard built with Microsoft Power Apps, where invoice questions, payment updates, vendor issues, and nearly every type of request can be reviewed, assigned to a team member, tracked and completed. Custom Dashboard Views help team members focus on their own work, while accounting managers have visibility into all the requests being managed by the team. Each request can receive a ticket number, can be assigned, reviewed, managed and archived.

Secure & Cost Effective

Moonlight 365 Accounting Dashboard is a Microsoft Power App making deployment fast, secure, and a one time cost. You own the code when the system is built, no recurring charges.

Security isn't an add-on; it's inherent. Accounting Dashboard lives inside your Microsoft 365 tenant, respecting all existing permissions. If certain documents or folders are restricted, The Dashboard enforces those rules automatically, ensuring your organization's data stays protected and only visible to the right people. How many solutions for Accounting are custom, secure, and cost effective?
