Moonlight Creator Product Sheet

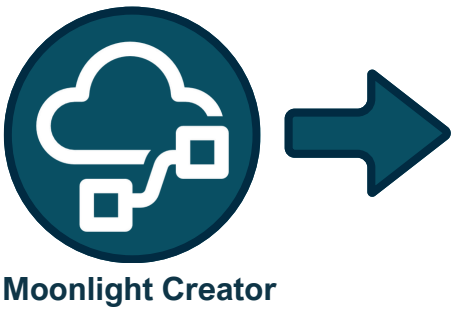

Illuminating your path through the technology darkness.

Moonlight365

Automate Creation [provisioning] of consistent SharePoint Sites Collections, Modern Groups, Document Libraries, Teams and more!

Moonlight 365 Creator

- Fully Integrated with M365
- In Tenant - 100% Secure
- Built on Power Platform
- Fully Configurable

The utility for SharePoint Site Management

Moonlight 365 Creator is an indispensable tool for firms, companies, and departments that want to create consistent SharePoint Sites, Teams, Document Libraries, and Groups. With or without a Site Template, the Creator creates multiple types of Microsoft content storage and communication sites, deploying all the desired metadata, security, views, and more simply by providing a few key pieces of information.

The Creator is crafted using Microsoft Power Automate technology - an under the hood utility that is a critical component for any company or firm seeking to take advantage of the +2MM SharePoint Site collections available to any Microsoft 365 Business tenant. The Creator is licensed as a perpetual license, not a subscription.

Creator Capabilities:

- Deploy SharePoint Configs
- Apply Security Models to SP
- Power Automate Based
- Template or Templateless
- Fully Automated
- Connect Workflows across Document Libraries

SharePoint Provisioning Made Easy

Many companies and firms who use SharePoint as their content management platform utilize Site Templates to make deployment of sites easier than building them from scratch. The Creator can use SharePoint Site Templates, or it can create the site design without a Site Template.

Moonlight 365 Creator is ideal for IT Departments that want to create SharePoint Storage facilities in a controlled fashion, with specific, repeatable but editable properties. Setting up a self-service SharePoint Site Creator, that provides a means for IT Departments, or Department Leaders to authorize site creation, will fall in love with the Creator!

Users now have an easy way to create consistently secure, searchable, and replicable SharePoint Sites for file and document storage.

Easy Creation of Powerful Sites, Groups & Teams

Creating complex consistent sites for your firm or business is not easy. Once your company or firm has found the right folder structure, security, metadata, and workflows for a SharePoint Site Collection. Duplicating the site configurations is not so easy, especially when you want everything but the name (or purpose) to be identical. The process to make a second, or nth site is extremely time consumptive.

Moonlight 365 Creator gives you the means to execute a SharePoint site design, quickly, easily and consistently! The Creator simplifies creating sites that have different names, purposes, or use cases while reusing many (or all) of the desired site architecture.

Interested in having a complex design deployed across many Document Libraries, easily and without errors? Talk to us about the Creator!

Lock in your data security

Many providers who create (provision) SharePoint architecture require an external service which reads data from your Tenant and then uses an Application ID to login to your Microsoft Tenant to provision the sites.

Companies and Firms that don't want ***ANY*** of their client, matter, customer, practice, department, region or other data to be held outside of Microsoft 365 ***need*** the Moonlight 365 Creator. Stop accidental or unintended data leaks by moving provisioning into your Microsoft Tenant!
